

Go beyond plain monitoring.
Observe & analyze
business impact with
APPLICATIONS MANAGER

Application Performance Monitoring Software

Run your business applications with confidence - both within the data center and on the cloud. Find and fix performance issues - from the URL to the line of code.

“ Nothing short of first rate. If you haven't already purchased Applications Manager, you're truly missing out on a great product at a great price.

-Miguel Velez-White,
State of Alabama - Finance-SBS

dashboards

Solution benefits

Single console to monitor heterogeneous IT infrastructure

- Support for over **150 diverse infrastructure components** including cloud apps, app servers, databases, web server/services, middleware & messaging components, virtual resources, etc. from a single console.

Ensure end-to-end performance of complex distributed applications

- Visualize your entire application - from the **browser to the backend database**.
- Troubleshoot bottlenecks **faster** with deep code-level diagnostics.
- Monitor any app within minutes - including production apps, with minimal overhead and configuration changes.

Browser synthetic monitoring for websites and web applications

- Synthetic monitoring using real browsers (Firefox)
- Simulate real user workflows.
- Selenium based scripting for multi-page end-user workflow simulation

Get unmatched visibility into your hybrid cloud and container infrastructure

- Monitor and manage your **cloud hosts, applications, VMs** as well as **container technologies** such as Kubernetes, OpenShift and Docker.
- Prevent performance degradation when you migrate from the **data center to the cloud**. Don't lose sight of how your application is performing regardless of where it is running - whether on premises, in the cloud or in a hybrid environment.
- Dynamically provision application resources to **respond to real time demand** and service level requirements.

Increase efficiency, profitability and productivity.

Maximise productivity

- Automated actions and notifications for quick recovery from faults and manual cost reduction.
- Intelligent reports to support rapid decision-making.
- Acute indicators for SLA breaches.
- Secure data handling.

Who is it for?

- IT Operations
- DevOps engineers
- Site Reliability Engineers
- Production support
- Architects
- CloudOps
- Anyone who is responsible for the application performance.

Effortlessly solve problems related to-

- Downtime
- Out of memory errors
- Slow response time
- Memory leaks
- Slow database response
- Deadlocks
- Database connection pool
- Unexplained CPU usage spikes, and more.

ManageEngine Applications Manager

Applications Manager is an **integrated application performance monitoring solution** for all your server and application monitoring needs. With our software, you can ensure the uninterrupted and smooth running of business-critical applications, measure key statistics in real-time, and tackle performance challenges easily.

With an incredible array of facilities like advanced fault analysis and management, historical reporting and analytical data, you can do more than just monitor your IT environment. You can observe the trends and predict future needs.

What do these companies have in common? They **trust** Applications Manager to take care of their IT infrastructure, as do 5000+ companies.

Supported Technologies

Application Servers | RDBMS | NoSQL | Big data services | Virtualization
Web Applications | Website | Middleware | Cloud Apps | Web Servers/Services
Servers | Converged Infrastructure | Containers | ERP
